

Combing Both –Yes it's absolutely possible!

Truly fantastic results can be achieved when you combine a course of three Universal Contour Wrap treatments together with a course of ten Eurowave Treatments, this way we can help you increase muscle tone and definition together with compacting the soft tissue and we are so confident of the results we'll guarantee that if you take both courses in our monthly program that we will guarantee an inch loss of between 20 and 30". An initial consultation will be required and a personalized program designed for you to gain the best results possible.

How to Help Yourself

When undertaking a programme of slimming treatments, you need to ensure you are drinking 6 / 8 tall glasses of water each day, this way; your body's natural waste disposal system is working at its best expelling waste and toxins. Incorporate body brushing before bathing each day, dry brush the entire body concentrating on areas of concern. This helps stimulate the circulation, and removes dead skin cells allowing effective penetration of any products applied. Your skin becomes extremely smooth within a matter of days, and you will feel more energised whilst your treatments will help you reduce in dress size.

Your Guide to Instant Inch Loss

Losing a Dress Size Couldn't be Easier...:

At the Skin Care Clinic, we are pleased to offer you two of the very best slimming treatments to help you lose inches, increase muscle tone and reduce the appearance of cellulite:

Universal Contour Wrap® Classic

A natural Sea Clay treatment enriched with trace elements and minerals, combined with a specialised wrapping technique using 25 / 30 elasticised bandages which works to lift, shape and contour the body.

This process which takes two hours from start to finish results in an excellent measurable inch loss, with the average client losing between 10 and 14" in just one treatment.

The following guarantees are offered with this treatment:

- That you should lose at least 6" in your first Universal Contour Wrap Treatment, or the treatment will be completely free!
- That you should maintain a loss of at least 6" for at least 30 days, assuming you have not gained any weight, or we will wrap you again free of charge.

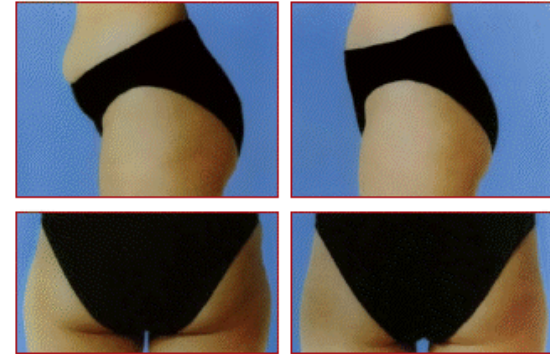

Eurowave – The Easy Way to Work Out!

Eurowave utilizes a pulsating faradic wave, to work out the targeted muscle group, producing a measurable difference after one session and usually a dress size reduction after a course of 10 treatments.

This inch loss can be achieved on any area of the body, which is usually stomach, hips, thighs and tops of the arms.

The treatment takes just 18 minutes, with most clients recording an inch loss of between 1 & 3" after their first treatment, then between a 5 & 8" reduction after a course of 10 treatments.

You simply lie back, and relax in total comfort whilst the machine does all the work, - just 18 minutes on the stomach is equivalent to 200 sit-ups, but no pain and no sore muscles the next day either!
